Pays For Itself In Energy Savings

Chalfant Air Curtain is like having an invisible door that keeps your indoor environment clean and comfortable year-round, while allowing customers and employees to enter and exit freely. Chalfant Air Curtain is the most effective, cost-efficient method of controlling pollutants in open doorways while preventing heating and cooling losses. Its sleek, low profile design and low noise level make it ideal for customer entrance doors and service doors in commercial facilities such as restaurants, supermarkets, retail stores, convenience stores and colleges as well as hospitals, hotels, schools, banks, theatres, laboratories, libraries, office buildings and manufacturing plants. An air curtain is also the most energy-efficient cold storage containment device on the market.

How Air Curtain Works

Chalfant Air Curtains use a powerful curtain of air to deflect the wind across the entire width of the doorway. This minimizes the amount of air entering and leaving the building while permitting unrestricted entry and exit of customers, employees and equipment.

PAYS FOR ITSELF IN ENERGY SAVINGS

Your Chalfant Air Curtains performs year-round in all climates to save energy while improving comfort in your facility. A high velocity curtain of air reduces outside wind penetration while recirculating the air that gets trapped at the ceiling. In winter, Chalfant Air Curtains circulates warm air inside while keeping cold air from entering your building. In summer, your air curtain keeps hot air out and maintains the cool, conditioned comfort inside. On average, your Chalfant Air Curtains will pay for itself in energy savings within one year. What's more, the unobstructed traffic flow afforded by Chalfant Air Curtains helps increase the speed and efficiency of personnel and equipment.

HIGH STANDARDS

Unheated models are National Sanitation Foundation listed. All models comply with USDA regulations. Heated models have Underwriters Laboratory listing.
